# Project Work – Math tools β-Test Feedback Reports

Error:
1. "hide side menu" buttons are different size in other pages

2. "numbering system conversion" decimal value prefix didn't set
   - Fixed with setting decimal value  prefix as ""
3. Wrong truth table at last one "P or Q and R"
   - Fixed with setting right value on javascript
4. Pages don't have title
   - I was forgetting totally whole the time so put right away

Uncategorized:
1. Converting 1010 from binary to binary gives 1111110010
2. Converting octal to decimal same result
   1,2 = possible to convert without prefix
   - If users don't take instruction don't work at all

Feedback:
1. Last page feels "redirecting" (cause side menu gone and different style)
2. About section logo is gone
3. It could be much better if "convert" button is after setting
   - After checking and gave a test for it, it feels much better so decided to change lay out
4. It took some time to learn how to use functions
5. Variables were presenting different order
   - I was using inserting table cell property so array variables go opposite way cause inserting make previous cell's row go up but I thought somehow it's same table variables but different order so technically it's fine but for users could be unfamiliar, so changed order in reverse from array
6. In last page, header or video is not centered
7. In last page, side bar disappear so have to go back with return
   - Wanted to show theme of youtube, and because of features' youtube side bar is hidden very first place so I have to think
8. It would be better table displayed already saving the user a click in number system output table
9. In combinatorics, combinations and permutations are disabled at first so there was extra click
   - For making sure that when user choose combination, permutation's option is disabled so It was on purpose for project's requirement
10. In random number, there were no repetition so doesn't feel truly random
    - Developed with putting "arrange option" and "repetition option"
11. Last page, showing different design looks fine

    - Feedback 11 and Feedback 7 have different about same page, so I should think about this.
